LUPIKAVACH HEALTH SCREEN PACKAGE - DAISY

Test Name	Result	Bio. Ref. Range	Unit	Method
-----------	--------	-----------------	------	--------

Complete Blood Count (CBC) , WHOLE BLOOD EDTA

Hemoglobin (Hb)	16.70	13-17	g/dL	Spectrophotometry
Red Blood Cell (RBC) Count	5.36	4.5-5.5	Million/cu.mm	Impedance
Packed Cell Volume (PCV) / Hematocrit	48.1	40-50	%	Calculated
Mean Corpuscular Volume (MCV)	89.6	83-101	fL	Calculated
Mean Corpuscular Hemoglobin (MCH)	31.2	27-32	pg	Calculated
Mean Corpuscular Hb Concentration (MCHC)	34.8	31.5-34.5	g/dL	Calculated
Red Cell Distribution Width (RDW-CV)	12.3	11.6-14	%	Calculated
Total Leucocyte Count (TLC)	5,820.0	4000-10000	Cells/cu.mm	Impedance

Differential Leucocyte Count (DLC)

Neutrophils	67.0	40-80	%	Impedance & FCM
Lymphocytes	27.0	20-40	%	Impedance & FCM
Monocytes	5.0	2-10	%	Impedance & FCM
Eosinophils	1.0	1-6	%	Impedance & FCM
Basophils	0.0	0-2	%	Impedance & FCM

Absolute Leucocyte Count

Neutrophils	3,899	2000-7000	Cells/cu.mm	Calculated
Lymphocytes	1,571	1000-3000	Cells/cu.mm	Calculated
Monocytes	291	200-1000	Cells/cu.mm	Calculated
Eosinophils	58	20-500	Cells/cu.mm	Calculated
Platelet Count	208,000	150000-410000	per cu.mm	Impedance
Mean Platelet Volume (MPV)	9.2	7.4-12.0	fL	Impedance

LUPIKAVACH HEALTH SCREEN PACKAGE - DAISY

Test Name	Result	Bio. Ref. Range	Unit	Method
-----------	--------	-----------------	------	--------

Erythrocyte Sedimentation Rate (ESR) , WHOLE BLOOD EDTA

Erythrocyte Sedimentation Rate (ESR)	8	0-15	mm	Modified Westergrens
--------------------------------------	---	------	----	----------------------

Interpretation:

Erythrocyte Sedimentation Rate (ESR) is a non- specific phenomena and is clinically useful in the diagnosis and monitoring of Pyogenic infection, inflammation and malignancies etc. It is especially low (0 – 1 mm) in polycythemia, hypofibrinogenemia, congestive cardiac failure poikilocytosis, spherocytosis or sickle cells.

Dr. Namrata Mestri
Consultant Pathologist

LUPIKAVACH HEALTH SCREEN PACKAGE - DAISY

Test Name	Result	Bio. Ref. Range	Unit	Method
-----------	--------	-----------------	------	--------

Blood Glucose Fasting (FBS) , FLUORIDE PLASMA

Blood Glucose Fasting (FBS)	159.00	70-100	mg/dL	GOD - POD
-----------------------------	--------	--------	-------	-----------

Interpretation:

This test checks your fasting blood glucose levels. Fasting means after not having anything to eat or drink (except water) for at least 8 hours before the test. This test is usually done first thing in the morning, before breakfast.

Pre- diabetes: Before people develop type 2 diabetes, they almost always have prediabetes—blood glucose levels that are higher than normal but not yet high enough to be diagnosed as diabetes.

Diagnosing Diabetes

FBS value	Interpretation
70-100 mg/dl	Normal
100-125 mg/dl	Pre- diabetes
More than 126 mg/dl	Diabetes

The above reference ranges are as per ADA guidelines.

Liver Function Test Gold (LFT Gold) , SERUM

Bilirubin, Total	0.60	0.2-1.3	mg/dL	Azobilirubin
Bilirubin, Direct	0.20	0.01-0.3	mg/dL	Calculated
Bilirubin, Indirect	0.40	0.0-1.1	mg/dL	Dual wavelength
Alanine Amino-transferase (ALT) SGPT	41.0	0-50	U/L	UV with P-5-P
Aspartate Aminotransferase (AST) SGOT	28.0	17-59	U/L	UV with P-5-P
Alkaline Phosphatase (ALP)	53.0	38-126	U/L	4-nitrophenyl phosphate
Gamma Glutamyl Transferase (GGT)	NA	15-73	U/L	Glycylglycine Nitroanalide
Total Protein	7.50	6.3-8.2	g/dL	Biuret
Albumin	4.70	3.5 - 5	g/dL	Bromocresol Green
Globulin	2.80	2-3.5	g/dL	Calculated
Albumin : Globulin Ratio (A:G Ratio)	1.68	1.1-2.5		Calculated

LUPIKAVACH HEALTH SCREEN PACKAGE - DAISY

Test Name	Result	Bio. Ref. Range	Unit	Method
Transferrin Saturation %	26.38			
Unsaturated Iron Binding Capacity (UIBC)	254.00			

Phosphorus , Serum

Phosphorus	3.40	2.5-4.5	mg/dL	PMA Phenol
------------	------	---------	-------	------------

LIPID PROFILE , SERUM

Total Cholesterol	144.00	<200	mg/dL	CHE/CHO/POD
Triglycerides	143.00	<150	mg/dL	Enzymatic
HDL Cholesterol	55.00	40-60	mg/dL	CHE/CHO/POD
LDL Cholesterol, Calculated	60.40	<100	mg/dL	Calculated
VLDL	28.60	<30	mg/dL	Calculated
Non HDL Cholesterol	89.00	<130	mg/dL	Calculated
Cholesterol : HDL Ratio	2.62	<5.0		Calculated

Interpretation:

The National Lipid Association and the National Cholesterol Education Program (NCEP) have set the following guidelines for lipids i.e. total cholesterol (in children, ages less than 18 years and adults ages 18 years and up), triglycerides, HDL cholesterol, LDL cholesterol, and non-HDL cholesterol:

Parameter	Desirable (mg/dL)	Borderline high (mg/dL)	High (mg/dL)	Very high (mg/dL)
Total Cholesterol Adults (>18 Yrs)	<200	200-239	>240	
Total Cholesterol Children (<18 Yrs)	<170	170-199	>200	
Triglycerides	<150	150-199	200-499	>500
LDL Cholesterol	Optimal <100 Above Optimal: 100 - 129	130-159	>160	
Non-HDL Cholesterol	Optimal <130 Above Optimal: 130 - 159			
Total Cholesterol/HDL Ratio	Male<5 Female<4.50			
LDL/HDL Ratio	Male <3.60 Female <3.20

LUPIKAVACH HEALTH SCREEN PACKAGE - DAISY

Test Name	Result	Bio. Ref. Range	Unit	Method
	Desirable (mg/dL)	Borderline risk (mg/dL)	Undesirable (mg/dL)	
HDL Cholesterol	>60	40-59	<40	

If the testing is performed in a non-fasting state, only the values for Total Cholesterol and HDL Cholesterol are considered reliable.
If Total Cholesterol is >200mg/dl or HDL Cholesterol is <40 mg/dl in non-fasting sample, a follow-up fasting lipoprotein profile is recommended to accurately assess LDL Cholesterol levels for appropriate clinical management

Measurements in the same patient can show physiological and analytical variations.
NCEP ATP III identifies non-HDL cholesterol as a secondary target of therapy in persons with high triglycerides.

LUPIKAVACH HEALTH SCREEN PACKAGE - DAISY

Test Name	Result	Bio. Ref. Range	Unit	Method
-----------	--------	-----------------	------	--------

Thyroid Profile Total , SERUM

Total T3	1.50	0.8-2	ng/mL	ECL/Competition
Total T4	6.69	4.5-11.7	µg/dL	ECL/Competition
Thyroid Stimulating Hormone (TSH)	2.070	0.27 - 4.2	µIU/mL	ECL/Sandwich

Interpretation:

Triiodothyronine (T3) is the thyroid hormone principally responsible for the regulation of metabolism of the various target organs. Accordingly, the T3 concentration in serum is more a reflection of the functional state of the peripheral tissue than the secretory performance of the thyroid gland.

Thyroxine (T4) is the main hormone secreted by the thyroid gland. T4 assessment can be utilized for the detection of hyperthyroidism, primary and secondary hypothyroidism, and the monitoring of TSH-suppression therapy.

TSH is a very sensitive and specific parameter for assessing thyroid function and is particularly useful for early detection or exclusion of thyroid disorders. Simultaneous measurement of TSH with free T4 is useful in evaluating the differential diagnosis of hypothyroidism and for monitoring thyroid- suppressive therapy. TSH has a diurnal rhythm, with peaks at 2:00-4:00 AM and troughs at 5:00-6:00 PM with ultradian variations. TSH levels vary diurnally by up to 50% and up to 40% variations on specimens performed serially during the same time of the day.

For diagnostic purposes, the results should always be assessed in conjunction with the patient's medical history, clinical examination and other findings.

Vitamin D, 25 - OH , SERUM

Vitamin D, 25 - OH	25.75	>30	ng/mL	ECL/Competition
--------------------	-------	-----	-------	-----------------

Interpretation:

Result ng/mL	Result Interpretation
≤ 20	Vitamin D deficiency
21 - 29	Vitamin D insufficiency
≥ 30	Adequate level of Vitamin D

25-hydroxyvitamin D is used to determine the overall vitamin D status as it is the major storage form of vitamin D in the human body and is present in blood at 1000 times higher concentration as compared to its active form 1, 25 dihydroxy Vitamin D.

In children severe deficiency of Vitamin D causes rickets. In adults, deficiency of Vitamin D causes muscle weakness, osteomalacia,

LUPIKAVACH HEALTH SCREEN PACKAGE - DAISY

Test Name	Result	Bio. Ref. Range	Unit	Method
-----------	--------	-----------------	------	--------

increased bone turnover, reduced bone mass and increased risk of bone fractures. Insufficiency has been linked to diabetes, different forms of cancer, cardiovascular disease and autoimmune diseases.

Decreased levels are found in malabsorption, steatorrhea, cirrhosis, pancreatic insufficiency, inflammatory bowel disease and thyrotoxicosis.

For diagnostic purposes, the results should always be assessed in conjunction with the patient's medical history, clinical examination and other findings.

Vitamin B12 (Cyanocobalamin) , SERUM

Vitamin B12 (Cyanocobalamin)	192	197-771	pg/mL	ECL/Competition
------------------------------	-----	---------	-------	-----------------

Interpretation:

Vitamin B12, also known as Cobalamine is essential in DNA synthesis, hematopoiesis and CNS integrity. Main dietary sources are meat, fish, eggs and dairy products. Decreased Vitamin B12 levels cause megaloblastic anemia, peripheral neuropathy, dementia and depression. Decreased levels may be due dietary deficiency, intestinal malabsorption, Intrinsic factor deficiency (Pernicious Anemia), parasitic infestation, inflammatory bowel disease and gastric or intestinal surgery. Increased Vitamin B12 levels may be seen COPD, obesity, diabetes, renal failure and Polycythemia vera or in patients taking B12 supplements. Normal serum Vitamin B12 level does not rule out tissue deficiency of Vitamin B12. In such cases, Serum MMA and homocysteine levels should be evaluated.

For diagnostic purposes, the results should always be assessed in conjunction with the patient's medical history, clinical examination and other findings.

* Marked values are the critical values.
