

Register No.: 24148810

Patient Name: PRABHAKARA KA

Dept/Unit: MEDICAL GASTRO/Unit 1

Laboratory Test Result

Report No.: L3729902

Age: 60 Years

Sex: MALE

Location: General Ward/N4B

Bill/Advice No : 25A00065289

Collection Date & Time : 27-06-2025 07:28 PM

Lab ID/Slide No : S/3288/2025

Sample Received Date & Time: 02-07-2025 11:27 AM

Report Status: Final

HISTOPATHOLOGY

Histopathology*

CLINICAL DETAILS:

Pancreatic Cancer.

D1 Ulcer biopsy to rule out infiltration.

GROSS:

Received multiple (4) pale white soft tissue bits, altogether measuring 0.4x0.3x0.2cms. All embedded in - 288.

MICROSCOPY: Report date 02/07/2025.

Section studied show tissue bits having gastric mucosa with focal erosion. 2 of the tissue bits show necrotic and fibrotic background having atypical tumor cells in singles, sheets and poorly formed glandular pattern. At focal places extracellular mucin also noted.

IMPRESSION:

Features are suggestive of Poorly differentiated carcinoma favoring Adenocarcinoma - Biopsy from D1 region.

Note: In view of CT scan showing pancreatic neoplasm, possibility of infiltration by the pancreatic carcinoma can be considered.
