**Discharge summary**

Patient Name: SHAILA SADANAND DESHABHANDARI Patient Status: RECOVERING
Register No: 23043697 Referred By: -
Age: 59 Years, Sex: Female Room No: C13
Address: 90, Santagal House, Post Kumta, Uttara Kannada
Admission Date & Time: 28-09-2024 01:09 PM Department/Unit: OTORHINOLARYNGOLOGY/Unit 2
Discharge Date & Time: 02-10-2024 Referred To: -
Doctor Name: -

DIAGNOSIS:
PALATAL CYST**COMPLAINTS:**

Swelling in the Hard palate since 5 Years

PAST HISTORY:

No known Comorbidities
No previous Surgical History
No significant past history

GENERAL EXAMINATION:

PR- 74/ min

BP- 110/70 mmHg

EAR:

NAD

NOSE:

D

ORAL CAVITY:

Lips- normal,
Angle of mouth- normal,
Mouth opening- adequate,
Teeth- upper row edentulous, lower row- normal
Bilateral gingivo-labial sulcus-normal,
Bilateral gingivobuccal sulcus- normal,
Anterior 2/3 of the tongue - normal,
Floor of mouth-normal,
3X4 cm swelling noted over the Hard palate on the right side 2cm from the midline, 3 cm from the upper alveolar rim which is hard in consistency, Non tender and immobile.

OROPHARYNX:

Base of tongue-normal, uvula-normal, soft palate-normal, bilateral anterior pillars - normal, tonsils- normal, bilateral posterior pillars- normal, posterior pharyngeal wall- normal

NECK:

No palpable neck lymph nodes

200

SHRIDHARA SCAN CENTRE
RAGHUNATH BUILDING, N H 66, KUMTA - 581 343
Phone : 08386 224010, 6363509707

Name: Mrs. Shaila Deshbhandari

Date: 18-09-2024

Thanks for reference Dr: Suresh Hegde

Age: 59 yrs Sex: Female

CT SCAN OF FACE

CT imaging was performed using thin contiguous axial plain AND contrast enhanced scan of face. Bony window reformatted and 3D VR images were obtained.

- A well defined homogeneously enhancing soft tissue density lesion seen at undersurface of anterior hard palate on right side.
There is cortical thinning and erosions of adjacent bony hard palate and medial margin of maxillary alveolar bone.
No e/o any extension in to maxillary sinus.
The lesion measures approx 19 x 13 mm in axial plane and 15 mm in cranio-caudal direction.
- Few well defined homogeneously enhancing lymph nodes are seen in bilateral upper-mid jugular regions, largest 19 x 11 mm.
- Tongue and floor of mouth appear normal.
- Bilateral parotid and submandibular glands and oropharyngeal region appear normal.
- Both maxillary, ethmoidal, sphenoidal and frontal sinuses appear normal.
- No definite deviation of nasal septum noted.
- Visualized part of mandible appears normal.
- Nasal cavity, superior and middle turbinates do not reveal any abnormality.
- Vomer bone, medial and lateral pterygoid plates on either side appear normal.

IMPRESSION:

- A WELL DEFINED HOMOGENEOUSLY ENHANCING SOFT TISSUE DENSITY LESION SEEN AT UNDERSURFACE OF ANTERIOR HARD PALATE ON RIGHT SIDE WITH CORTICAL THINNING AND EROSIONS OF ADJACENT BONY HARD PALATE AND MEDIAL MARGIN OF MAXILLARY ALVEOLAR BONE.

Features are suggestive of neoplastic lesion most likely. Adv: Histo-patho correlation.

DR. GANESH BHAT, DMRD, DNB.
CONSULTANT RADIOLOGIST.

Laboratory Test Result

Register No: 2204/007

Report No: 1344108

Patient Name: SHAILA SABANAND DE SHAIH SHAIH

Age: 58 Sex: FEMALE

Department: OTORHINO LARYNGOLOGY

Location: General Ward CT 3

Ref/Advice No: 245024/950

Collection Date & Time: 10-09-2024 05:11 PM

Lab ID/Date No: 540412/004

Sample Received Date & Time: 04-10-2024 04:15 PM

Report Date: Final

HISTOPATHOLOGY

Histopathology*

CLINICAL DETAILS:

Swelling in hard palate - 5 years.

2x2cm cystic swelling in hard palate right side anterior part.

GROSS:

Received a pale brown nodular tissue bit measuring 1.7x1.2x0.7cm. Outer surface - pale brown. Cut surface - pale white. All embedded in 4841.

MICROSCOPY: Report date 3/10/24

Sections studied shows tumor with infiltrative margins having tumor cells arranged in tubules, trabeculae, cribriform pattern, lobules & nests. These cells show moderate pleomorphism having small to medium sized cells, vesicular nucleus often with optical clearing, eosinophilic cytoplasm. Periphery of the tumor shows eddy like pattern & perineural invasion. Mitoses are rare. Tumor cells are surrounded by fibromyxoid stroma.

IMPRESSION:

Features are those of Polymorphous Adenocarcinoma - Hard palate.

CECT Neck

Well defined homogeneously enhancing soft tissue density lesion seen at undersurface of anterior hard palate on right side with cortical thinning and erosions of adjacent bony hard palate and medial margin of maxillary alveolar bone, features suggestive of neoplastic lesion, HPE correlation required.

TREATMENT GIVEN:

PALATAL CYST excision under GA.

Intra-operative findings- 3x4 cm cyst noted in the hard palate, which is 2cm from the midline, 2cm from the alveolar rim hard in consistency.

ADVICE ON DISCHARGE:

TORATIL 500MG 1-0-1 X 5 DAYS

TPAN 40MG (B/F) 1-0-0 X 5 DAYS

TACECLO PLUS 1 SOS X 5 TABLETS

CHLORHEXIDINE MOUTH WASH V.O.V X 1 WEEK

REVIEW IN ENT-2 OPD ON 15/10/2024 (TUESDAY) WITH HPE REPORTS
ENT 2 OPD DAYS ARE ON TUESDAY, THURSDAY AND SATURDAY

SPECIMEN

Blocks for second opinion

GROSS

Received 2 paraffin blocks labeled as 4841/24 and 4841/24 A for review

MICROSCOPIC EXAMINATION

Section studied show an infiltrating tumor. The tumor cells are arranged in solid nests, glands, cribriform pattern, cords and nests. The tumor cells are large round to polygonal having vesicular nuclei with abundant amount of acidophilic cytoplasm. Occasional mucinous areas seen. The cells show mild to moderate degree of nuclear pleomorphism with atypical mitosis 2-3/10HPF. The stroma is desmoplastic and mild lymphocytic and plasma cell infiltration. No lymphatic or vascular or perineural invasion seen. No areas of necrosis seen.

DIAGNOSIS

Salivary gland carcinoma ; Low grade / Intermediate grade
?Mucoepidermoid carcinoma / ?Secretory carcinoma

COMMENTS

Advised Immunohistochemistry for confirmation.

CONDITIONS OF LABORATORY TESTING & REPORTING

1. It is presumed that the test sample belongs to the patient named or identified in the test requisition form.
2. All tests are performed and reported as per the turnaround time stated in the AGILUS Directory of Services.
3. Result delays could occur due to unforeseen circumstances such as non-availability of kits / equipment breakdown / natural calamities / technical downtime or any other unforeseen event.
4. A requested test might not be performed if:
 - i. Specimen received is insufficient or inappropriate
 - ii. Specimen quality is unsatisfactory
 - iii. Incorrect specimen type
 - iv. Discrepancy between identification on specimen container label and test requisition form
5. AGILUS Diagnostics confirms that all tests have been performed or assayed with highest quality standards, clinical safety & technical integrity.
6. Laboratory results should not be interpreted in isolation; it must be correlated with clinical information and be interpreted by registered medical practitioners only to determine final diagnosis.
7. Test results may vary based on time of collection, physiological condition of the patient, current medication or nutritional and dietary changes. Please consult your doctor or call us for any clarification.
8. Test results cannot be used for Medico legal purposes.
9. In case of queries please call customer care (91115 91115) within 48 hours of the report.
